This high fidelity prototype includes roughly the same features as outlined in the rough low fidelity frame earlier. The white box is meant to make cart items stand out so the user can easily see what they selected. The user has the ability to modify the quantity of each item selected as well as the ability to remove any unwanted item(s). The total price for each item selected is stated on the right, with the total being added up directly underneath the individual total prices of each item (based on quantity selected).
